siunitx

On change les règles liés aux opérations pour intégrer dans ces règles l'associativité à gauche et la priorité des multiplication et division.

On change les règles :

Par:

$$\begin{array}{lll} < expr > & \rightarrow < expr > + T \\ & \rightarrow < expr > - T \\ & \rightarrow T \end{array}$$

$$\begin{array}{ll} T & \rightarrow T * F \\ & \rightarrow T / F \\ & \rightarrow F \end{array}$$

$$\begin{array}{ll} F & \rightarrow P \\ & \rightarrow -P \\ & \rightarrow \text{not P} \end{array}$$

$$\begin{array}{ll} \rightarrow < entier > \\ & \rightarrow < caractère > \\ & \rightarrow true \\ & \rightarrow false \\ & \rightarrow null \\ & \rightarrow < acces > \\ & \rightarrow new < ident > \\ & \rightarrow character ' val (< expr >), \\ & \rightarrow < expr > < operateur > < expr > \\ & \rightarrow (< expr >) \end{array}$$

$$\begin{array}{ll} < operateur > \rightarrow = \\ & \rightarrow / = \\ & \rightarrow < \\ & \rightarrow < = \\ & \rightarrow > \\ & \rightarrow rem \end{array}$$

On développe la grammaire pour obtenir appliquer la dérécursivation :

```
\langle fichier \rangle \rightarrow \text{with Ada.Text IO}; use Ada.Text IO; procedure \langle ident \rangle is begin \langle instr \rangle^+ end; EOF
               \rightarrow with Ada. Text IO; use Ada. Text IO; procedure < ident > is < decl > begin < instr > end; EOF
               \rightarrow with Ada.Text IO; use Ada.Text IO; procedure < ident > is begin < instr >^+ end < ident >; EOF
               \rightarrow with Ada. Text IO; use Ada. Text IO; procedure < ident > is < decl > begin < instr > end < ident >; EOF

On enlève les récursivités à gauche qui posent problème. On choisit la numérotation suivante pour l'algorithme :

| A_1 | < expr > |
|-------|-----------|
| A_2 | T |
| A_3 | F |
| A_4 | P |
| A_5 | < instr > |
| A_6 | < acces > |

```
< instr >
                     \rightarrow < acces > := < expr >;
                     \rightarrow < ident >;
                     \rightarrow < ident > (< expr > ^+);
                     \rightarrow return;
                     \rightarrow return \langle expr \rangle;
                     \rightarrow begin < instr > + end;
                     \rightarrow if \langle expr \rangle then \langle instr \rangle^+ end if;
                     \rightarrow if \langle expr \rangle then \langle instr \rangle^+ (else \langle instr \rangle^+) end if;
                     \rightarrow if \langle expr \rangle then \langle instr \rangle^+ \langle elsif \rangle^+ end if;
